Who Is MarsMasters?

- MarsMasters is a knowledge-based company in the field of cryptocurrencies that has been operating since 2019. It implements and manages a set of special products and services in the field of cryptocurrency.
- It is an ideal Web 3.0 software solutions company that aims to assist both companies and individuals improve the industry performance of their projects by providing a full array of features and services that set them apart from the competition.
- MarsMasters has a fully registered cryptocurrency license and has over 4000 members that benefit from 24/7 global live support.
- Our company are located in the United Arab Emirates, Turkey, and Estonia. Our professional team is working and focusing on blockchain.
- One of our key goals is to assist people working in the decentralized finance field and to help develop the industry's worldwide adoption and usage. To that purpose, we provide specific advantages to blockchain investors and businesses.

Why We Are More Effective Than Defi?

Convenience

MarsMasters could ensure simple and effective access to financial services for every individual. All users can use our various services and different packages in the most convenient way possible.

24/7 Support

Users can take advantage of our 24/7 and real-time support if they encounter problems and find answers to their questions. We also have an email on the website to keep in touch with our users.

Low Risk of Decentralized Platform

Decentralized networks tend to be open-source projects, which means anyone can build apps, products, and services on top of them. That expands opportunities for network growth. Under closed systems, developers are limited to what a central organization dictates what can be built or develop.

No Crypto Knowledge Needed

The world of DeFi is great, but for those who are not familiar with the crypto world, it is a big concern. Since our vision is to expand the use of cryptocurrencies, there is no need to have crypto information to utilize MarsMasters services.

Why Choose Us

**Various services
and products**

**24-hour global
live support**

**Virtually no
geographic
limitations**

**Ease and
comfort to use**

**No Crypto

Staking Platform

These Coins Are Accessible On Our Platform, And Anyone Can Stake Through Their Considered Coins:

CRYPTO

Bitcoin
(BTC)

Ethereum
(ETH)

Tezos
(XTZ)

STABLE COIN

Tether
(USDT)

Binance USD
(BUSD)

MarsMasters Pool offers a variety of staking packages that you can choose from. The duration of these staking packages are starting from 30 days, and to withdraw your profit, depending on the type of staking package that you choose, it may take a month, or you have to wait for your staking package duration to end.

Please take note that each staking package specifies the minimum and maximum tokens for you the stake.

How Does Mars Masters Pool Work?

How the staking will be done on the Mars Masters platform?

1. In the first step and to start, we must say that the process method is as follows every user deposit a desired token to the Mars Masters platform and it goes directly to our smart contract.
2. Based on the best yield farming APY, we stake the tokens on one of the third-party smart contracts such as PancakeSwap, CURVE Finance, SushiSwap, etc...

NOTE

Chiefly, we change the stablecoin to another coin/token to stake on third-party platforms, to give an example, we will examine a staking process from start to finish, and we will use USD Tether as an example:

We receive USDT stable coin on our platform, we exchange %50 of USDT to BUSD and the other %50 to CAKE token on the PancakeSwap platform to stake on a %700 APY yield farming. We will share 50 to 70 percent of the %700 APY with our users.

3. We receive the extra tokens from our yield farming staking and we'll send that token to the Mars Masters users' wallet from the source of our smart contract.

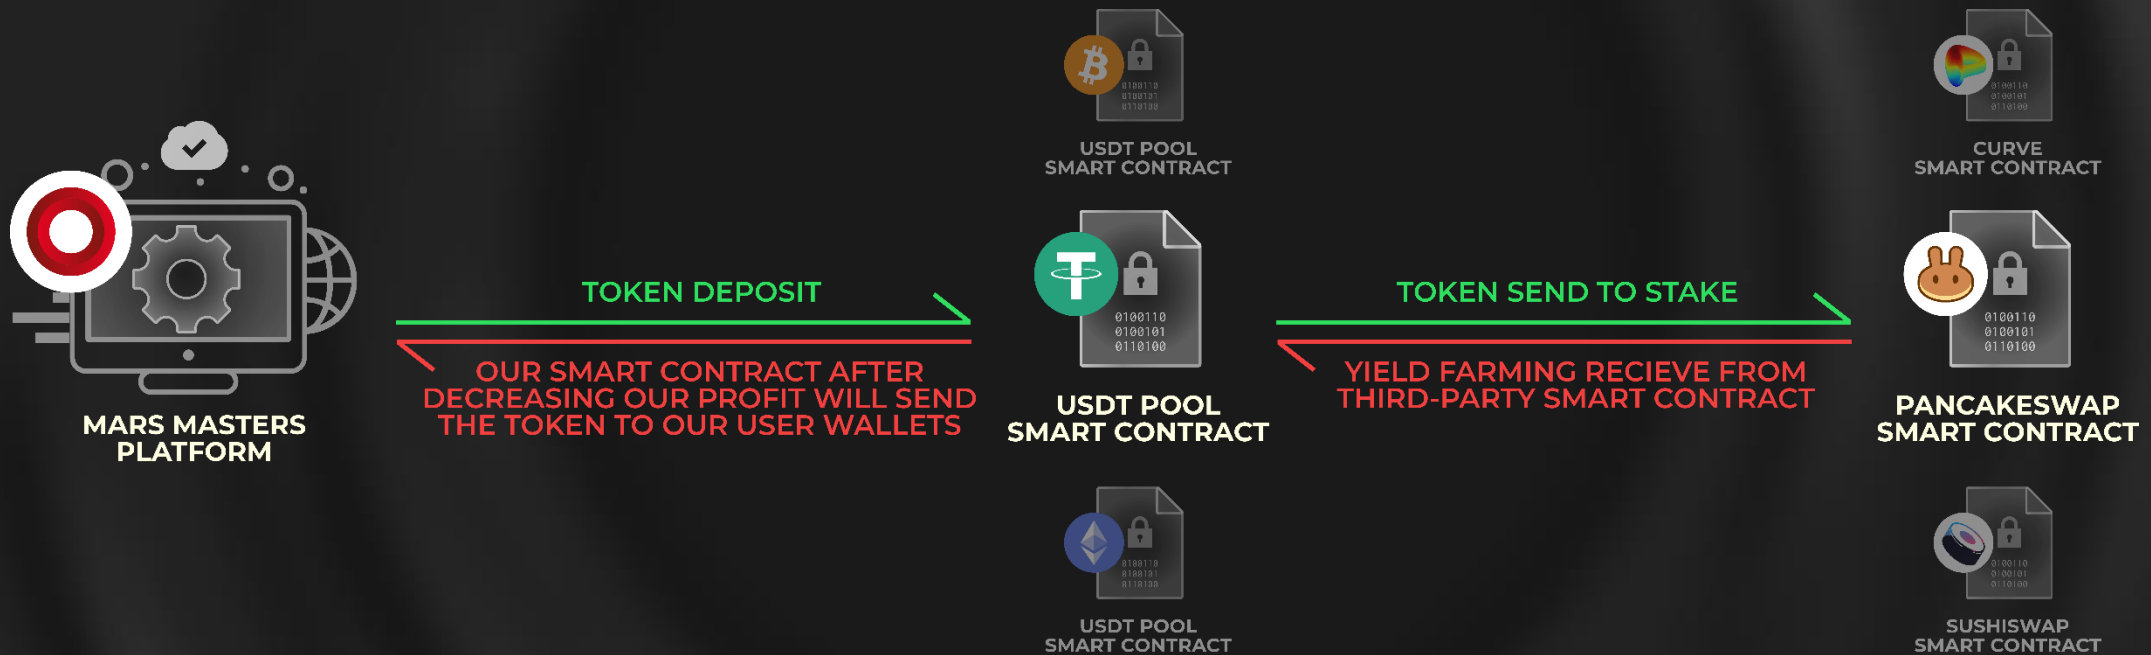

NOTE

For USDT or BUSD pool, we first exchange the token we received from the yield farming for stable coin and after that, we'll send it to the user's wallet.

For instance, we have received a CAKE token from the yield farming CAKE/BUSD pool.

In this case, we will exchange CAKE to USDT, and subsequently, Mars Masters smart contract will send it to our user's wallet.

How Does Mars Masters Pool Work?

Certificate & Award

- MarsMasters has started since 2019, and MarsMasters staking started its activity in 2020.
- Our offices are located in the United Arab Emirates, Turkey, and Estonia.

FAQ

1) What is Staking?

In the cryptocurrency world, staking refers to “locking up” a digital asset by “staking” it, agreeing to hold it in a wallet on its respective blockchain network. By agreeing to stake some or all of your holdings you are helping to ensure the blockchain the assets are staked on, operates correctly and securely. In exchange for helping to secure a blockchain network, participants who stake their coins, receive a share in the block reward in the form of newly minted coins.

2) Why staking pool?

Compared to solo staking, a staking pool will give smaller rewards because each successful block forging (validation) will split the rewards among the many participants of the pool. In addition, most pools will charge fees, which will reduce the final payout. On the other hand, staking pools provide more predictable and frequent staking rewards. Other than that, they allow stakeholders to make a passive income without having to worry about the technical implementation and maintenance of setting up and running a validating node.

3) In which countries does MarsMasters have an office?

MarsMasters company are located in the United Arab Emirates, Turkey, and Estonia.

4) What are the risks of staking?

Staking cryptocurrencies refers to, literally, locking your holdings of a certain cryptocurrency to support the blockchain. Indeed, staking is profitable. But it is not so without its risks.

These risks include:

Incurring great losses

Being subjected to scams and theft

Significant expenses

Delayed rewards

Validator Risk
